

Thank you for purchasing the Spectrum™ Battery Wi-Fi Clock. These clocks connect to your building's Wi-Fi and synchronize their time with the Internet, providing excellent precision as well as on-line monitoring of the clock's battery and Wi-Fi signal strength.

Because these clocks use standard Wi-Fi technology, there are no extra transmitters or master clocks needed. All you will need for the setup is a smart phone, tablet, or laptop.

Our quick-setup process will guide you through connecting your phone/tablet/laptop to the clock's internal web page, where you'll enter your building's Wi-Fi settings. Once the clock has these settings entered, it will connect to your Wi-Fi network and synchronize its time from the Internet.

This setup should only take a few minutes. When you're ready to start, follow the instructions below. Thanks again!

On your phone, tablet, or laptop, open a browser and go to:

<http://natsco.link>

Our smart wizard will walk you through getting your clock connected to your building's Wi-Fi.

Be sure to have your Wi-Fi network name and Wi-Fi password handy!
