

Introduction

National Time 200 Series square clocks are a classic shaped clock and a perfect fit for the right architectural application. 200 Series are available with or without internal illumination. The fully enclosed extruded aluminum cabinet serves as a lighting and component enclosure that provides an easy means of installation. Select any hand and dial configuration or create your own graphics including logos or other visions. All 200 Series clocks can be controlled with manual or automatic clock controllers allowing for time correction following power outages and day light savings. Optional GPS and LAN interface to the NIST Atomic clock base are also available. Clock mechanisms are sized to meet design requirements. Since 1930, National Time clocks are proudly made in the USA.
