

Introduction

National Time 500 Series Skeleton clocks, also known as silhouette, open face and marker clocks, are characterized by using the building facade as the clock dial. Numbers and minute markers are mounted to the wall to create a unique architectural element. A wide range of design and mounting options are also available. Dial markers can be affixed to a wall surface directly or other materials to provide contrasting background. Masonry details such as cast stone or soldier course brick is often used to frame clocks. Skeleton marker clocks can be provided with a through wall or front mount configuration as well as open or free suspension. Clock mechanisms are sized to design requirements. Since 1930, National Time clocks are proudly made in USA.

Product Description

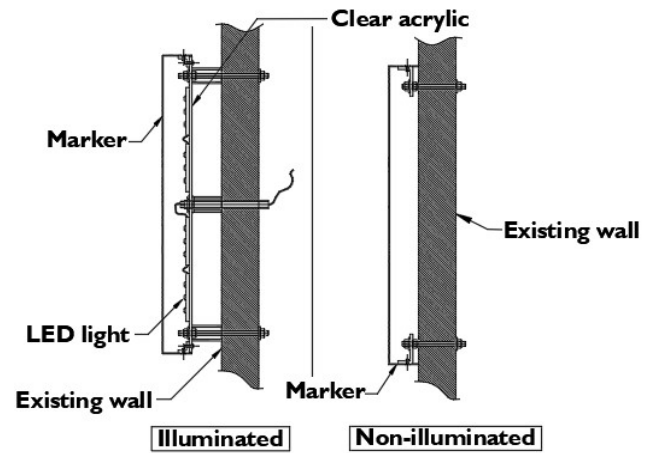

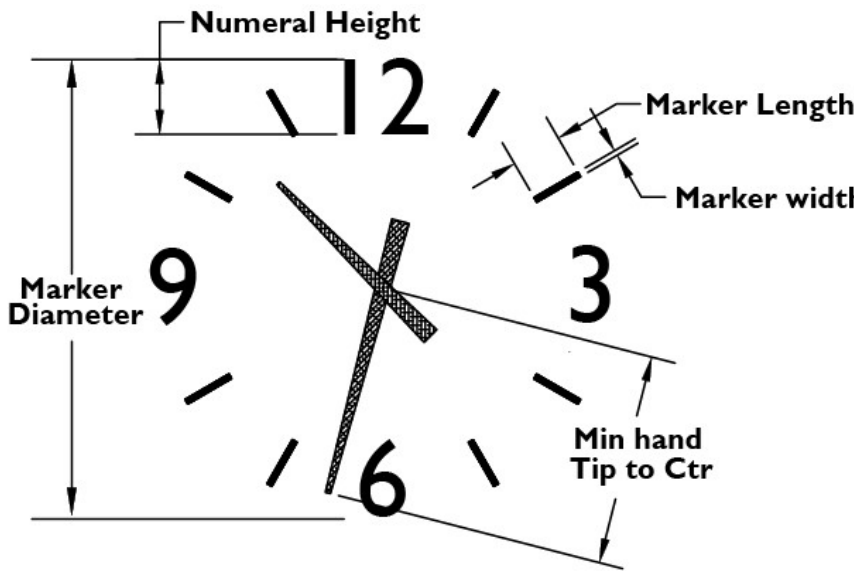

- Dial markers are CNC cut for flat applications or reverse channel illumination.
- Custom dial designs available to meet your architectural needs.
- Available in 50/60Hz synchronous or minute impulse applications.

Quality Assurance
